

I oppose and respectfully ask that you reject the NAB's petition 04-160 to limit the types of information that can be provided by XM Radio. XM Radio is revolutionary in providing it's subscribers with valuable information. When traveling across country, you can easily obtain weather and traffic information for the area you are entering, instead of trying to find that particular radio station that happens to be the information authority. When you're not familiar with the area, finding the right station can be difficult. We pay for the XM Radio services, so that we can dial directly to the information we need and not have to listen to volumes of ads that don't pertain to us. There is still a place for free, ad riddled radio.. many people would not pay for the XM service. But, XM Radio has the right to provide the information that it's subscribers demand. Please don't let the big radio and TV lobbyists and big money take away our rights to pay for the information we want.
